## Software Engineer

---

I'm a software engineer with extensive experience in customer and client relations. I am experienced in Ruby on Rails and JavaScript based programming. I have always loved technology and programming since I was a kid. I continue to learn new skills to improve myself. I'm currently learning Python and Next.js. I am learning Next.js to create my portfolio website and I am learning Python to increase my skill set. I have contributed to open source projects through participation in Hacktoberfest 2022. I have skills and experience in teamwork, working under pressure, meeting deadlines, leadership, and time management. I have a strong desire and willingness to learn that will help me to make up for lack of time in the industry. I pride myself on having a moldable personality and being able to work well with anyone. I will always find a way to complete what is asked of me and I won't stop working on it until the job is done.

## TECH PROJECTS

---

### News Owl - [Github](#) | [Demo](#)

News website where a user can see and search for the latest news articles.

- Pulls data from a public API to display news articles and updates
- Allows users to favorite and save articles after a refresh
- Utilizes React and Bootstrap to give a clean and user friendly interface

### Corporate Cleaner - [Github](#) | [Demo](#)

An employee management website where a user can create a list of their employees, managers and more for their company. There are many options to sort through and easily access the specific data of each employee..

- Uses a Ruby backend server with Sinatra to support a React frontend app
- Uses many "one to many" relations to connect the different data tables .
- Users have full CRUD features with the employee, manager, and supervisor data

## TECHNICAL SKILLS

---

Java, JavaScript, React, Redux, Ruby, Rails, SQL, ActiveRecord, HTML, CSS, react-Bootstrap, Next.js, Python
