TECHNICAL PROJECTS

Reexpress - [GitHub](#)

View/add customer reviews for products/services.

- Built front end with React.js, Express/Node backend with API endpoints for Fetch requests.
- Followed multiple conventions of React's built-in hooks.

JSBattleship - [GitHub](#)

A game of strategy, action, and suspense.

- Used MVC framework to execute game design.
- Adhered to the single-responsibility principle and created custom methods to process game events.

HomePro - [GitHub](#)

Helps patients with their home exercise program after their facility stay or therapy treatment visits have concluded.

- Installed user authentication via Rails sessions and cookies, providing a secure web application for patients and therapists.
- Configured custom routes in Rails backend to allow seamless and secure user login and signup forms.
- Utilized React hooks to implement controlled forms for user login, sign-up, and event creation.
